VIT BHOPAL

PROJECT REPORT

Name – Snehardhya Karmakar

Registration No. – 25BEC10063

Subject – Digital Literacy

Faculty Name – Kanan

Course Code – CSE0001

Slot – B23

TASK 1 :

For this task, I used Canva to create my digital literacy awareness infographic. I chose Canva because it is simple to use and has many ready-made design options which made the work easier and more organized.

In my design, I tried to explain what digital literacy actually means in a way that is easy for students to understand. I included examples of common digital tools that we use in our daily academic work, along with some basic internet safety tips. I also added points about maintaining a good online presence and writing proper emails, since these are important skills for students today.

While working on this, I found it interesting how design and content need to go together. Just writing good content is not enough, it also has to look clear and visually balanced. The difficult part for me was deciding how much information to include without making the infographic look too crowded.

Overall, this task helped me understand that digital literacy is not just about using technology, but about using it in a responsible and effective way.

TASK 2 :

For this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. I chose these platforms because they are widely used by students and professionals in technical fields.

GitHub is mainly used for sharing code and projects, so I created a profile README with my basic details and plan to upload my academic projects there regularly. LinkedIn is useful for building a professional network and showcasing achievements, so I updated my education details and will continue adding skills, certifications, and projects. Kaggle is a platform for data science practice, where I can learn from datasets and participate in competitions.

Over the next four years, I plan to use GitHub to build a strong project portfolio, LinkedIn to connect with professionals and explore internship opportunities, and Kaggle to improve my problem-solving and data analysis skills. I believe maintaining these profiles will help me develop both technical and professional skills, which will be useful for my future career.

TASK 3 :

For this task, I explored both a coding platform and a collaboration tool. I created an account on HackerRank and completed a beginner-level problem to understand how coding challenges are structured. It helped me practice basic problem-solving and get familiar with writing and testing code online.

For the collaboration part, I used Google Forms to create a digital literacy awareness quiz with five questions. The form included both multiple choice and short answer questions, and I linked it with a Google Sheet to view responses. This gave me an idea of how data can be collected and analyzed easily.

Through this task, I understood how coding platforms can help improve logical thinking and programming skills with regular practice. At the same time, tools like Google Forms are useful for surveys, quizzes, and academic projects where collecting responses is required.

Overall, these platforms will help me in my studies by improving my coding ability and making it easier to collaborate and organize information efficiently.

TASK 4 :

Poor digital communication can sometimes create serious misunderstandings. For example, if a student sends an email to a professor without a proper subject, greeting, or clear explanation, the message may be ignored or misunderstood. This could lead to missed deadlines or loss of important opportunities.

In such situations, the problem usually happens because the message is unclear or unprofessional. Using proper email etiquette, such as writing a clear subject line, maintaining a polite tone, and explaining the purpose of the email properly, can make a big difference.

If the student had written the email in a more structured and respectful way, the professor would have understood the request better and responded accordingly. This shows that good digital communication is not just about sending a message, but about how effectively it is written and presented.

TASK 5 :

While researching this topic, what surprised me the most was how simple tricks are used to carry out serious frauds. Many scams do not involve advanced hacking, but instead depend on confusing or misleading people into making mistakes, especially during online payments.

I realized that even a small action, like approving a wrong request, can lead to instant financial loss. This made me more aware of how careful we need to be while using digital platforms.

One habit I will personally change is to always double-check every payment request before entering my UPI PIN. I will also avoid responding quickly to unknown messages or offers without verifying them first. This task helped me understand that awareness and caution are the best ways to stay safe online.
